

Reporter

Generate reports with your favorite reporting apps

Mediagenix On-Demand's Reporter Extension loads your data into Google BigQuery and lets you generate reports with your favorite reporting and business intelligence tools. Make your data accessible to whoever needs it in your organisation, in the format they need it.

Custom publishing dashboards

Publish customized reports to internal teams and external partners.

Integrates with all key reporting software

Use your data to generate reports in Qlik, Tableau or Google Data Studio.

Full set of features

- Powerful insights: dig deeper into your data and produce custom-tailored reports with freshly updated data from Mediagenix On-Demand, Sequence and Metadata. E.g.: *"How many hours of original content will I publish next month, platform by platform?"* or *"what are the CableLabs Asset IDs for all late deliveries last week?"*.
- Easy reporting: integrates natively with all major reporting and business intelligence tools, such as Tableau, Qlik or Google Data Studio.
- Solid foundation for massive amounts of data based on BigQuery, Google's *"fully managed, petabyte scale, low cost enterprise data warehouse for analytics"*. Export 100,000s of records in seconds.
- Extensive documentation available at help-centre.bebanjo.com [https://help-centre.bebanjo.com]
